

WHAT IF YOU COULD HAVE REAL-TIME HANDS-FREE TRACKING AND MONITORING OF PATIENTS, STAFF AND ASSETS IN YOUR HOSPITAL?

MAKING PATIENT TRACKING AND PATIENT FLOW SIMPLE

THE TAGNOS TECHNOLOGY

RTLS - dashboards - proactive alerts - updates to family - analytics and insights

We think healthcare organizations are facing unnecessary costs and revenue loss due to unseen inefficiencies and not taking control of the changing reimbursement model driven by HITECH and Affordable Care Act (ACA) legislation. For example, new legislation is increasingly shifting Medicare to payment based on episodes of care (BPCI) and quality of care (MACRA). New rules also require hospitals to measure patient satisfaction (HCAHPS) to enable objective and meaningful comparisons between hospitals.

“Tagnos was able to save us hundreds of thousands through better room utilization.”

- **Randy Saad**, Director of PeriOperative Services - White Memorial Medical Center
