

SMART INTEROPERABILITY

Illuminate. Automate. Orchestrate

TAGNOS centralizes your existing data and provides workflow solutions to illuminate, automate, and orchestrate healthcare results within operating rooms, emergency departments, and asset management systems.

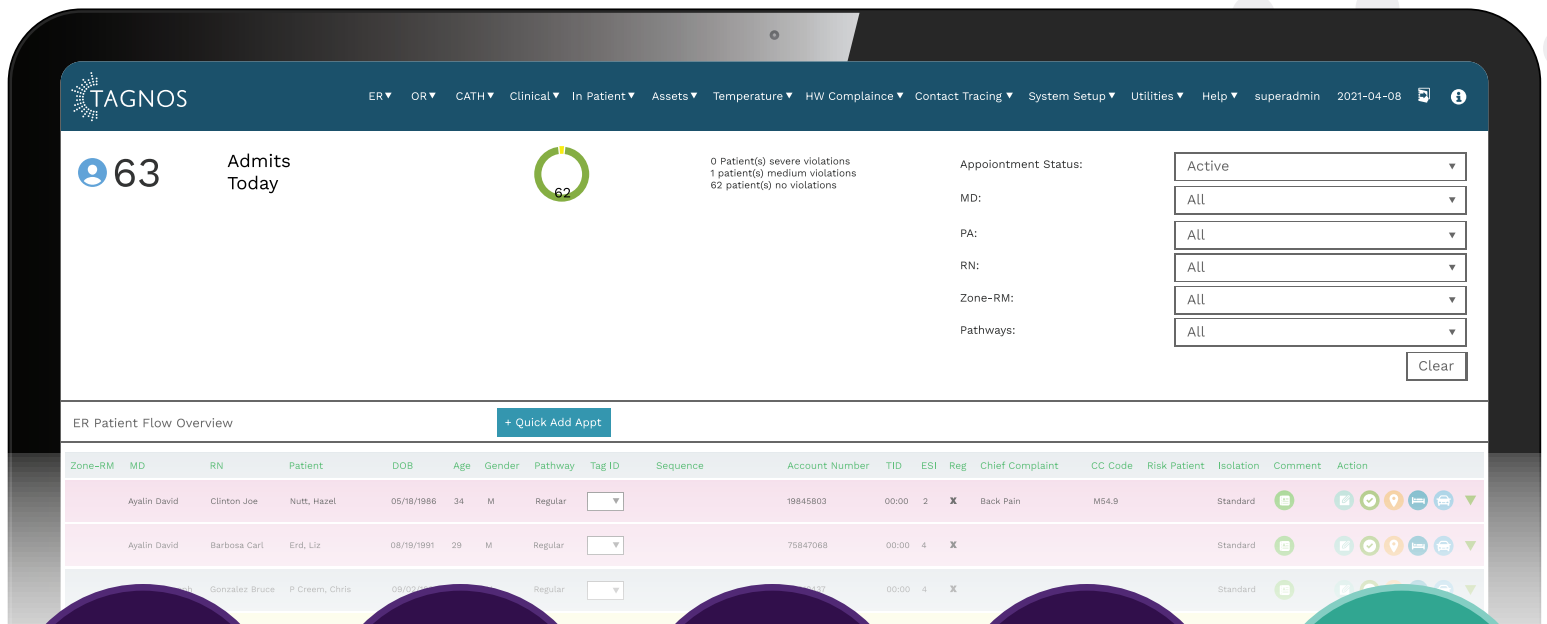

- Illuminate ED Performance
- Simplify Communications
- Improve Accountability

WORKFLOW SOLUTIONS

ED Orchestration

TAGNOS ED Orchestration enables streamlined emergency care by providing real time situational awareness and data-driven performance insights. Specifically tailored for the emergency department, ED Orchestration is designed to help you decrease left without being seen (LWBS) cases, improve interdepartmental communication, and accelerate time to treatment.

SOLUTION FUNCTIONALITY

Treat More Patients

TAGNOS ED Orchestration enables streamlined emergency care by providing real time situational awareness and data-driven performance insights through various dashboards, RTLS tracking, automation of communications and tedious tasks, case load predictions, and AI based workflow orchestration.

ILLUMINATE

ED KPI Dashboards

Dashboards with insights into operational performance with summary and drill-down dashboards for KPIs such as LWBS, room turnaround, and more.

Patient Status Dashboards

Real-time dashboards that display the current status of each patient, using milestones captured in both clinical & non-clinical IT systems.

Patient, Staff, and Asset Tracking

Searchable maps with the real-time location of any tagged patients, staff, and/or assets. Automatically recorded location-based milestones.

AUTOMATE

Inpatient Transfer Communications

Notifications and inpatient census coordination to facilitate the ED-to-inpatient transfer process.

Automated Workflow Communications

Alerts and notifications automatically sent to clinical and non-clinical staff to facilitate operations such as room turnaround.

Automated EMR/EHR Milestone Data Entry

Patient milestones captured by IT systems connected to TAGNOS can be automatically recorded into the EMR/EHR.

ORCHESTRATE

Patient Census Predictions

Using historical & ongoing data, TAGNOS can predict and then display predicted patient census to facilitate proactive operational planning.

Surge Identifications

Using historical & ongoing data in the EMR/EHR, TAGNOS can detect, in real time, surges in the ED and automatically communicate customized surge levels.

Inter Departmental Workflow Integration

With ED Orchestration, hospitals can utilize other TAGNOS solutions such as Asset Orchestration to facilitate inter-departmental process mapping.
